

Journal of Agromedicine

The Journal, edited by Steven R. Kirkhorn, M.D., M.P.H., FACOEM, is unique in that its primary purpose is to address the health and safety issues of those who work in production agriculture, as well as those who consume and use the products, or are impacted by the production practices. The quarterly, peer-reviewed Journal has been indexed by Medline since 2004.

In press – special pesticide issue

Volume 12, Issue 1 (to be published August 2007)

Guest editors: Lynn R. Goldman, M.D., M.P.H.; Ana Maria Osorio, M.D, M.P.H.

- A review of acute and chronic effects of pesticides on human health
- Updated and expanded from original presentations given by the authors at the 2002 International Conference on Pesticide Exposure and Health in Washington, D.C.
- New appendices containing annotated Web-based references, acute poisoning severity rating scales, and reporting documents

Submissions sought

Submissions can be in the form of original research, policy issues and clinical aspects of agricultural health. Topics include: occupational health and safety in agriculture; zoonotic and emerging diseases; food safety; health education strategies; public health issues of agricultural practices; impact of chronic disease and health interventions in the agricultural workforce, and strengthening and maintaining the human capital component of agriculture.
